The following questions ask about your feelings about using new types of therapy, interventions, or treatments. Manualized therapy refers to any intervention that has specific guidelines and/or components that are outlined in a manual and/or that are to be followed in a structured/predetermined way.

Fill in the circle indicating the extent to which you agree with each item using the following scale:

<table>
<thead>
<tr>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not at All</td>
<td>To a Slight Extent</td>
<td>To a Moderate Extent</td>
<td>To a Great Extent</td>
<td>To a Very Great Extent</td>
</tr>
</tbody>
</table>

1. I like to use new types of therapy/interventions to help my clients.
2. I am willing to try new types of therapy/interventions even if I have to follow a treatment manual.
3. I know better than academic researchers how to care for my clients.
4. I am willing to use new and different types of therapy/interventions developed by researchers.
5. Research based treatments/interventions are not clinically useful.
6. Clinical experience is more important than using manualized therapy/treatment.
7. I would not use manualized therapy/interventions.
8. I would try a new therapy/intervention even if it were very different from what I am used to doing.

For questions 9-15: If you received training in a therapy or intervention that was new to you, how likely would you be to adopt it if:

9. it was intuitively appealing?
10. it “made sense” to you?
11. it was required by your supervisor?
12. it was required by your agency?
13. it was required by your state?
14. it was being used by colleagues who were happy with it?
15. you felt you had enough training to use it correctly?
